

ezCargo® is a cargo & fleet transaction platform that integrated with GPS, digital map, GSM/GPRS and Internet technologies to provide goods owners, shipping companies and logistics centers a real-time and high efficient information service.

System Benefits :

For Goods Owner :

owners can check goods location and delivery status by entering the No. of Bill of Lading (BOL).

For Logistics Center :

administrators can release shipping news; find qualified shipping trucks within specific region and time; bargain a reasonable price to ship goods.

For Shipping Company :

administrators can release available trucks and their information (equipment) to shipping company; find goods to be shipped; dispatch and monitor trucks; trace history shipping route; create statistic reports of missing trucks, speeding tickets, and drivers evaluation, etc.

Transaction & Operation Center Services :

- latest news release
- system management and data maintenance
- economic communication transmission program
- latest version of digital map
- GPS hardware, barcode reader, display monitor (optional)
- customized reports (optional)
- product operation training courses and consultation services
